PERSONAL PROJECTS

E-Commerce Website Link:

<https://github.com/satishhalhalli/e-commerceee>

- Proficient in ReactJS, React Router DOM, React Bootstrap, and CRUD A fully-functional e-commerce web application built using ReactJS. The application allows users to browse and purchase products, add items to their cart.
- Used React Router DOM to handle navigation and routing within the application
- Implemented CRUD operations using Axios API to add, remove, and update items in the cart on CRUDCRUD.com
- Utilized various hooks like useState, useEffect, useContext, useReducer, useRef, useHistory to enhance the functionality of the application

Food-Order Website

Link:<https://github.com/satishhalhalli/FoodOrderWeb>

- A responsive food order web application built using ReactJS, Hooks, and Context API. The application contains a homepage that displays food items, and a cart page where users can view their selected items and place an order.
- Designed and implemented the user interface for the entire application
- Wrote the code for the cart functionality, which allows users to add and remove items from their cart
